

LED Tapes

Installation Manual

Pack Contents

- LED tape reel with 2m power lead

Important Safety Information

This product is powered by an LED driver (sold separately). Installation should be carried out by a qualified electrician.

Installation (for LED tape use)

- 1 Ensure the surface is clean and dust free. If a professional cleaning solution is being used, then please ensure enough time is left for the surface to dry

- 2 Cut the LED tape to the desired length if required. It can be cut every 25mm along the bronze copper marks

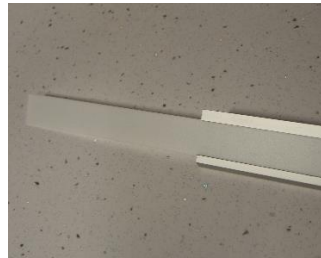

- 3 Fix the LED tape to the surface. Apply pressure along the length to ensure a firm bond

- 4 The micro connector plug on the LED tape power lead should be placed into the black distribution block on the LED driver (sold separately)

LED Tapes

Installation (for use with aluminium profile – sold separately)

1

The aluminium profile, diffuser and LED tape can be cut to the desired length if required

2

Remove the diffuser from the aluminium profile. The profile end cap where the cable exits needs to position the cable

3

Insert the LED tape and diffuser – ensure all filings and swarf are removed before applying the LED tape

4

Fix the profile into place using the clips provided
