

Quick-SET Connectors

Simple and efficient dowel-based carcass connector.

The QUICK-SET is a simple and efficient cabinet connector based on dowels. Two versions are available with a 5 mm and an 8 mm thread. The 8 mm plastic dowel remains the same for both versions and the thread length is 7.5 mm for both versions. This means that the QUICK-SET can be used in the 5 mm shelf support holes and in the 8 mm dowel holes. It can also be used for centre panels with a material thickness of 16 mm or more.

The QUICK-SET is self-tightening and is not visibly mounted. The two-part connector is processed in the same way as a conventional dowel but much quicker. The QUICK-SET can be loaded immediately and used in standard drill holes.

- High pull-out values. They are 60 kg for 19 mm chipboard, 73 kg for 16 mm MDF, 73 kg for 17 mm solid fire and 85 kg for 17 mm solid beech.
- No gluing – Due to the serration on the outside of the plastic dowel and an anchoring of the steel bolt on the dowel base, the QUICK-SET does not require any glue during use.
